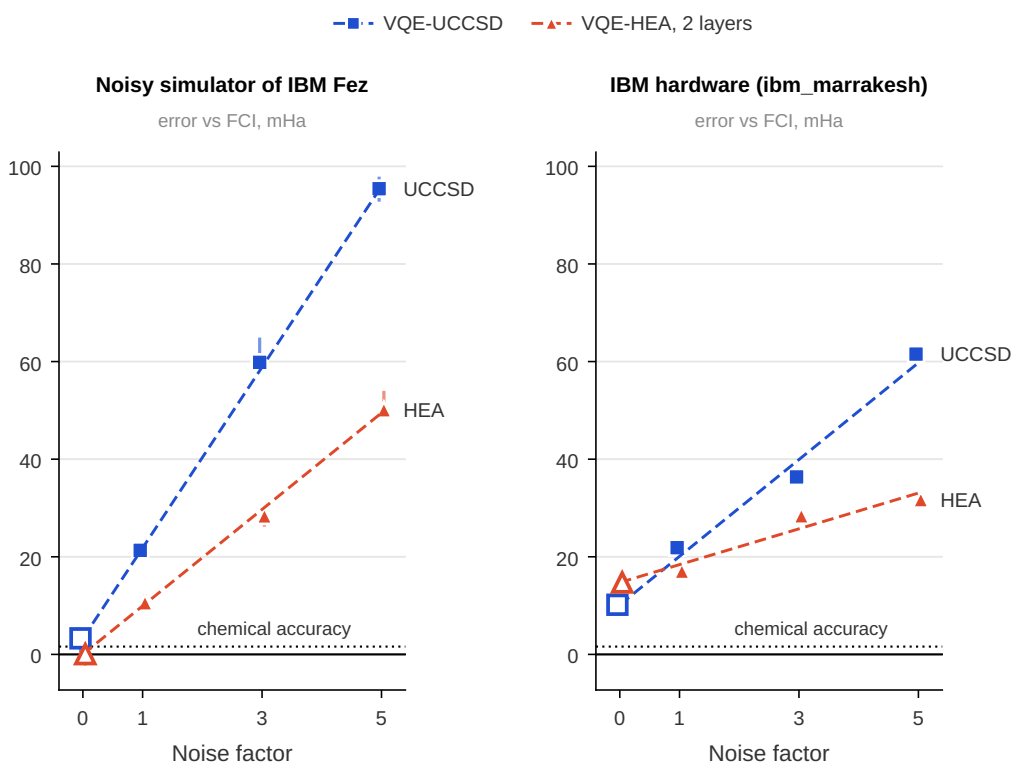
Zero-noise extrapolation for H_2 at R = 0.735 Å, readout-mitigated energies



H_2, STO-3G. Filled: energy measured with two-qubit gates folded ×1, ×3, ×5 (simulator: mean of 5 shot seeds, bars: all 5); dashed: linear fit; hollow: extrapolated value at zero noise. Hardware: one run on ibm_marrakesh, 2026-11-03, qubits 153-154.
