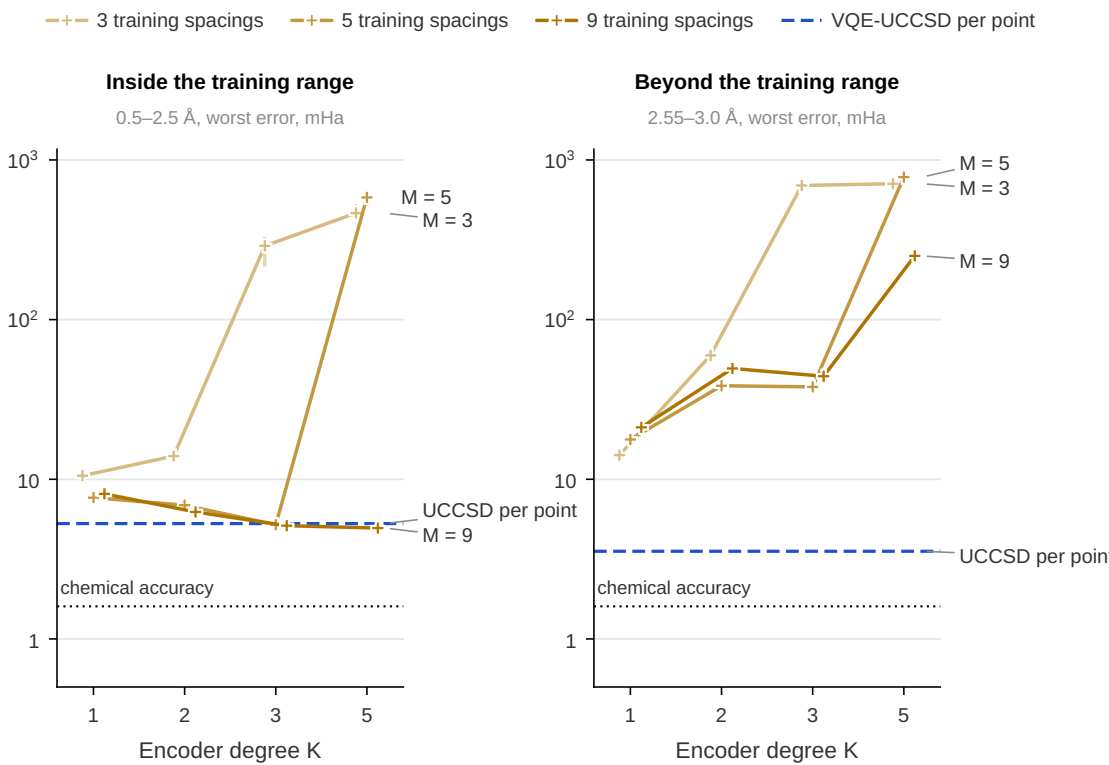
Worst error of the conditional QNN on the H_4 chain by encoder degree and training set size



H_4 chain, STO-3G, noiseless statevector, UCCSD circuit (26 angles). K = 1 is the linear encoder of Meta-VQE. Markers: median of 5 initialisations, bars: all 5. Test spacings every 0.05 Å. Dashed: worst error of UCCSD trained separately at every spacing of the same range.
