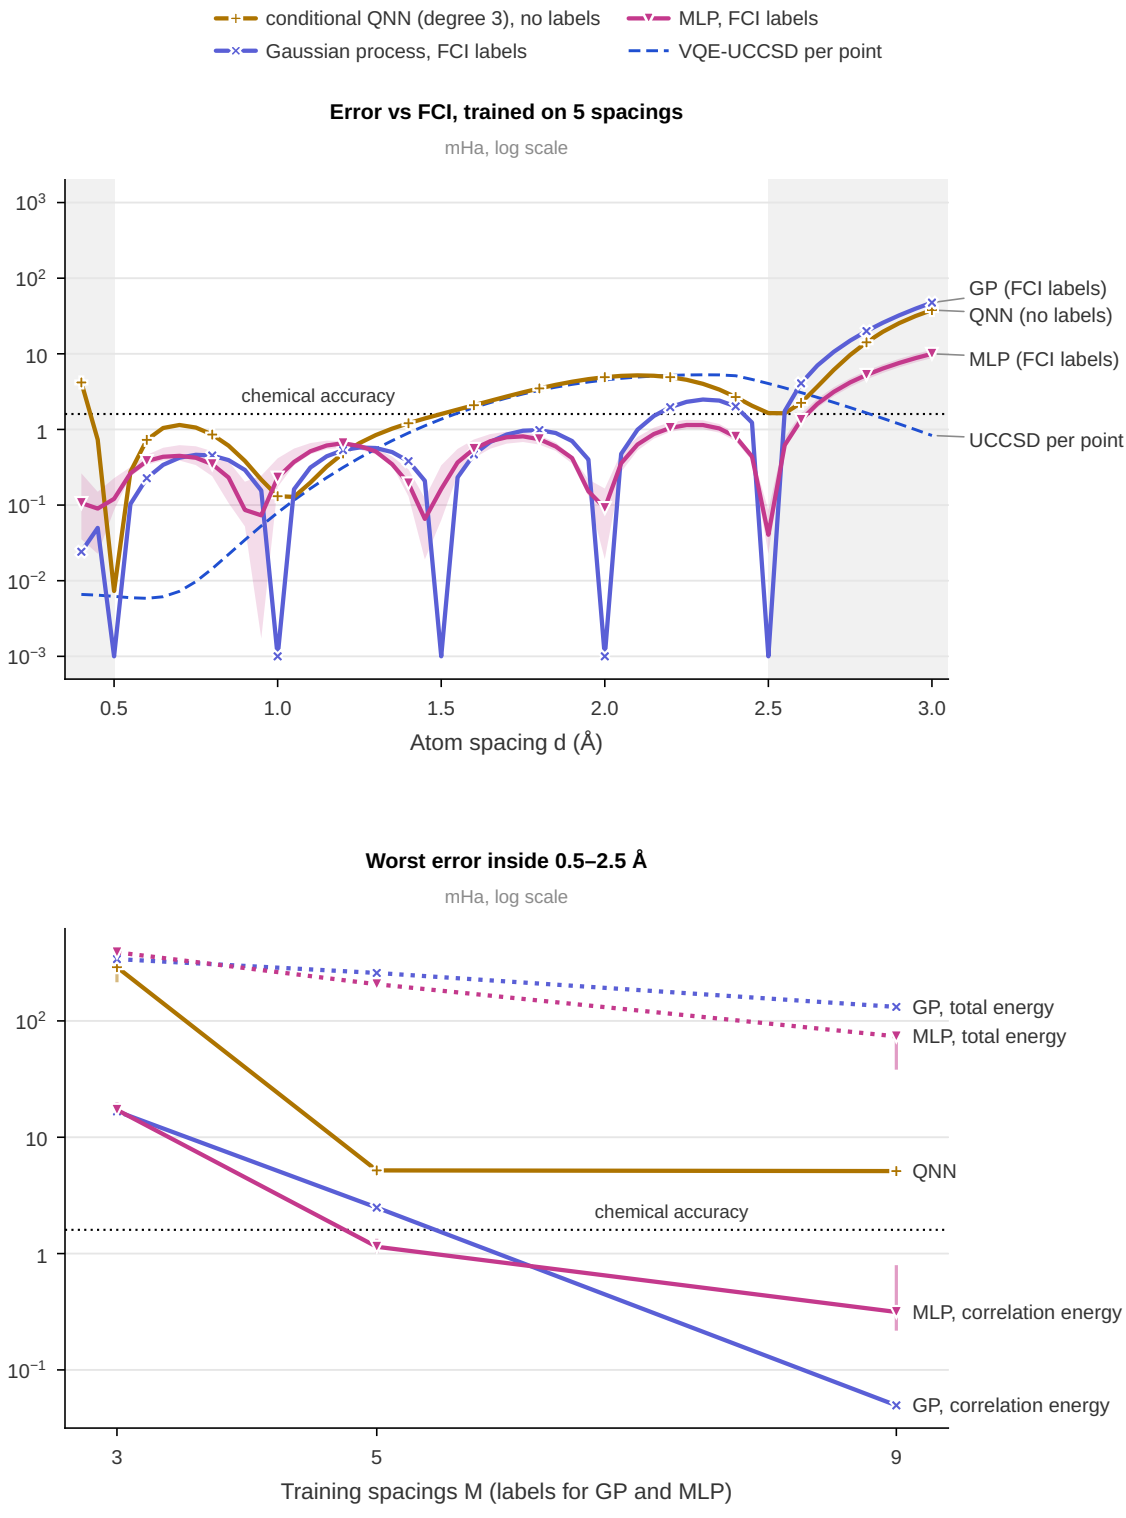
Conditional QNN without labels vs regression on exact energies, H_4 chain



H_4 chain, STO-3G, noiseless statevector, UCCSD circuit (26 angles). GP and MLP fit the correlation energy (FCI minus HF) at the training spacings, HF is computed at every test spacing; dotted, bottom: fitted to the total FCI energy instead. Lines: median of 5 initialisations (GP: one fit), bands and bars: all 5. Gray: outside the training range. Errors below 10^{-3} mHa are drawn at the floor.
